

WP2 - Identification of instruments and user communities, definition of requirements

Written by Administrator

Tuesday, 27 June 2006 13:49

This workpackage will provide systematic information about identification, instrument specifications, services and access requirements for science equipment suitable for the RINGrid project aims. The main scope of this research is the group of expensive and rare scientific instruments as well as the high performance computing software for post processing applications and data calculations. The user communities interested in remote access of high level equipment and services will be determined and closely evaluated.
